

Opinion Makers Section

(This section is prepared by João Clímaco)

How should MCDA practice respond to behavioural research findings?

*Theodor J Stewart
University of Cape Town
South Africa*

The decision sciences in general, and MCDA in particular, have wrestled agonizingly over discrepancies between the decision support or aiding models being used for analysis, and the results from behavioural decision science (for example that of Kahnemann and Tversky). Well some at least have agonized ... there are those who don't seem to care much about empirical behavioural results. I recall one well-known figure stating during a conference debate that he had little patience with concern over behavioural axioms, preferring to get to the mathematics where one can prove theorems! Nevertheless, I am sure that the readership of this newsletter are as concerned as I am about these issues, and for this reason I thought I would take this opportunity to put forward some personal views on the debate.

What is the purpose of a model designed for decision aid or support? It surely is not to *describe* how people make decisions unaided by MCDA. If we simply try to mimic what decision makers are going to do without our aid, then we are not adding much value to the process. On the other hand, it would be arrogant to suggest that we can direct decision makers to what they *ought* to do, as no model which we develop will ever capture the full richness of human decision making values, preferences and goals. Thus the role of MCDA (and I am aware that I am repeating what many others have said before me) is to support the process of learning and discovery by which decision makers arrive at a satisfactory solution to their decision problem.

Two immediate questions face the decision analyst or decision aiding scientist when confronted with a

discovery that decision makers act in a manner which is systematically at variance with one's favoured decision models. These are:

- Do the discrepancies reflect fundamental human values and desires, or are decision makers adopting heuristics to cope with highly complex tasks which are not fully attuned to their fundamental aspirations? If the latter is the case, is it then appropriate to incorporate the same heuristics into the decision support model? I am reminded of a comment by Simon (in the introduction to the 3rd edition of *Administrative Behavior*), to the effect that people Asatisfice because they have not the wits to optimize).
- Will adaptation of the decision models, to incorporate greater realism in modelling of observed preferences, aid or hinder understanding of the model (and thus ultimately the learning and discovery process) by decision makers?

What, then, is the real value of behavioural decision research to the practice of MCDA? As I have argued, the right response may often not be to develop more complicated models. My view is that the most vital contribution from behavioural research relates to the manner in which we seek inputs from decision makers as part of the process of constructing our preference model. The realization that the perceived acceptability of specific tradeoffs can be strongly influenced by the framing of the problem has serious implications for the manner in which value measurement techniques are applied in practice. Whether certain tradeoffs are viewed as losses or as the foregoing of gains would appear to derive from the problem framing, and on the basis of research results concerning the effect of framing would be likely to have a substantial influence on the form of value function model derived. Simulation studies which I have conducted have revealed how sensitive value function models can be to the functional shape of the partial value functions, and it is precisely these functional shapes which may be influenced by the perceptions of what are gains or losses. I strongly suspect that similar framing issues might also influence perceptions of appropriate veto thresholds in outranking, or aspiration levels in goal programming. Certainly, similar potential biases may well creep into all methodologies of MCDA. In particular, all methods make use of some form of direct or indirect weighting of the criteria, which are

undoubtedly susceptible not only to framing, but also to anchoring and availability biases.

The implications of the above is that perhaps the greatest challenge to research in MCDA is not so much to refine our decision models any further, but to gain greater understanding of how judgmental biases in user inputs affect the outputs and recommendations of the models, and how we can compensate for these (or at least ameliorate their effects). Perhaps in this way we can also move closer to meta-MCDA, i.e. a philosophy of MCDA that integrates the various streams of thought which appear sometimes divergent, but which should more appropriately be seen as different responses to the search for balance between transparent and simple decision support on the one hand, and the infinitely rich complexity of real human judgments on the other.

MCDA Research Groups

Les activités de recherche en aide multicritère à la décision au CERMID

Par

1. Bref historique et orientation générale

Le CERMID (Centre de Recherche en Modélisation, Information et Décision) est un regroupement de chercheurs de la faculté des sciences de l'administration (FSA) et d'autres institutions, qui s'intéressent à la modélisation des processus organisationnels, à l'analyse des technologies de l'information, et aux méthodes d'aide à l'évaluation et à la décision dans les organisations. Il succède au CRAÉDO (Centre de recherche sur l'aide à l'évaluation et à la décision dans les organisations) donc il retient cinq chercheurs réguliers et auxquels se sont ajoutés sept nouveaux chercheurs.

Les chercheurs du CERMID s'intéressent donc aux problèmes organisationnels, socio-économiques,

environnementaux et technologiques qui influencent la performance des organisations et des entreprises, et particulièrement aux impacts de ces phénomènes sur la gestion et la prise de décision. Ils s'intéressent également aux fondements sur lesquels repose l'étude de ces phénomènes, tels l'épistémologie, la théorie de l'organisation, les systèmes d'information, l'analyse multicritère, la programmation mathématique, les probabilités appliquées, les statistiques, la programmation dynamique, et les technologies de l'information. Les principaux objectifs du CERMID sont de contribuer, d'une part, au développement et à la transmission des connaissances dans ces domaines d'expertise et, d'autre part, à la formation de chercheurs et de personnel qualifié.

2. Le programme de recherche du CERMID

Le programme de recherche du CERMID est fortement multidisciplinaire. C'est pourquoi son équipe de chercheurs offre un éventail d'expertises diversifiées et complémentaires. Ainsi, le Centre regroupe des spécialistes en recherche opérationnelle, génie industriel, économie appliquée, gestion des technologies de l'information, marketing et épidémiologie.

Ce programme a pour thème le développement et l'expérimentation d'outils prescriptifs (au sens faible du terme) d'aide à la décision pour la planification et le contrôle dans les organisations. Les problèmes abordés présentent à des degrés divers un ou plusieurs aspects fondamentaux suivants : (M) le caractère multi-dimensionnel du problème, (I) un niveau important d'imperfection de l'information, (C) un niveau de complexité élevé, ainsi que (T) la présence des technologies de l'information.

(M) La plupart des modèles unicritères déterministes prescriptifs quantitatifs que l'on retrouve dans la littérature font des hypothèses très simplificatrices. Nous nous sommes tournés vers le développement de modèles multicritères qui permettent de mieux prendre en compte la multi-dimensionalité de nombreux problèmes de planification stratégique.

(I) Avec le deuxième aspect fondamental, nous nous intéressons à modéliser explicitement, à l'aide d'un langage approprié l'imperfection due à des facteurs aléatoires, imprécis, ..., hors du contrôle du décideur.

(C) Le troisième aspect fondamental présent à travers nos projets est celui de la complexité. Celle-ci se manifeste tant dans la taille des problèmes et la quantité des données à traiter, dans la conception de modèles à haut niveau

d'intégration que dans les difficultés de calcul qui en découle.

(T) Avec le dernier aspect fondamental, nous examinons l'impact des technologies de l'information (TI) sur les organisations et leur gestion, la gestion des TI, le changement organisationnel dû au changement technologique, et la gestion du commerce électronique.

Ainsi, notre équipe concentre ses efforts sur le développement et l'expérimentation d'outils de planification et de contrôle qui incorporent explicitement ces quatre aspects.

3. Le volet aide multicritère à la décision

Dans le cadre de ce volet, nous développons et appliquons des méthodologies multicritères pour des problèmes où l'aspect multi-dimensionnel est très important et où le plus souvent on est en présence d'imperfection de l'information. Les principaux projets qui s'inscrivent dans ce volet sont :

- La programmation mathématique à objectifs multiples (PMOM) ; notamment l'introduction des préférences du décideur dans le goal programming ;
- L'efficacité en PMOM stochastique ;
- Les méthodes multicritères en contexte incertain (la valeur de l'information additionnelle) ;
- L'obtention d'un résultat robuste en aide multicritère en contexte d'imperfection de l'information ;
- Le choix d'une procédure d'agrégation multicritère ;
- L'analyse multicritère et l'enveloppement des données ;
- La décision de groupe, l'aide à l'obtention d'un consensus ;
- Les démarches (participatives) de concertation ;
- La phase de structuration d'un problème organisationnel complexe ;
- L'application des méthodologies multicritères en gestion et en génie.

Les membres du CERMID contribuant de manière (plus ou moins) importante à ce volet sont :

B. Aouni, Université Laurentienne, Sudbury.

G. D'avignon, FSA, Université Laval

A. Guitouni, Centre de recherche pour la défense de Valcartier (CRDV)

P. Lang, FSA, Université Laval

J.M. Martel, FSA, Université Laval

R. Nadeau, FSA, Université Laval

B. Urli, Université de Québec à Rimouski

Comme vous pourrez l'observer à partir de la liste des publications d'autres membres du CERMID collaborent à ce volet (C. Banville, M. Gravel, B. Lamond, L. Kiss, W. Price et K. Zaras). Des liens de collaboration étroits ont été conservés avec plusieurs étudiants après leur diplômatation (Aouni, Azondékon, Ben Abdelaziz, Boulaire, Couillard, Guitouni, M'Zali, Ouellet, Rebai, Twarabimene, Urli, Veilleux, Yolalan).

Forum

A question of vocabulary

*Ph. Vincke,
SMG / ULB
(pvincke@smg.ulb.ac.be)*

Some weeks ago, our colleague Alexander Lotov sent a message to the Multicriteria Discussion List, proposing a discussion around the following question: "What does mean a real-life application of a MCDM technique ?"

The main reason for this proposition was the fact that, in his opinion, it is often argued in publications or conferences, that MCDM tools and approaches fairly seldom find real-life applications. In his message, he recalled a definition, given by E. Kasanen et al. (EJOR, Vol. 120, 2000, pp. 496-510), based on the following 4 elements:

- an actual problem of an actual organization must be studied,
- using real data,
- in which decision makers participate,
- and where the obtained results are implemented.

Not completely satisfied by this definition, A. Lotov proposed another one, as starting point for a discussion which should have been finalized in the Ankara conference of the International MCDM Society. His definition was the following: "A MCDM technique is said to have real-life applications if some institutions or people have mastered the technique and use it independently from the author for a relatively long time". Some colleagues participated in a e-discussion during a few weeks but no conclusion was inferred from it and, to my knowledge, the point was not treated in the Ankara conference. Interested by the subject, the editor of our working group bulletin, José Figueira asked me to reproduce here my modest contribution to the previous discussion.

This could be the starting point of a new exchange and, maybe, to some common conclusion.

Reading the e-discussion introduced by A. Lotov, I had the feeling that all the participants had different definitions and that they all were right. So, the fact is that several different "objects" are called real-life applications by different colleagues: if we want to avoid misunderstanding and futile discussions, the best way is probably to be more precise in the vocabulary that we use.

On basis of the messages which were exchanged, here is a first and non-exhaustive list of objects which were called real-life applications:

- Object A: description of a situation where a scientist used a multicriteria method to work on real data in view to help a client to solve a decision problem.
- Object B: object A where the approach was proved to be well-founded on a theoretical point of view.
- Object C: object A which led to new methodological developments.
- Object D: object A where the client was satisfied by the work done by the scientist (several reasons are possible).
- Object E: object A where the result was effectively implemented.
- **Object F: object A which led to an important evolution in the decision process of an organization.**

A possible terminology (English natives will certainly propose better terms) could be: A = real-life application (rla), B = well-founded rla, C = methodologically interesting rla, D = satisfying rla, E = successful rla, F = revolutionary rla.

Everybody is invited to introduce new objects and new terms in order to build a common dictionary on the rla's (we all know how important is the existence of a common vocabulary in a working group).

For our community, it can be interesting to be informed on as many rla's as possible to improve our experience and to convince potential "clients" (or colleagues) that our tools are effectively used. So, I strongly support the idea, given by one of the discussants, of a Web Site built as a library and a discussion room about rla's.

Finally, a last question was "when does a rla justify a publication in a scientific journal ?". Of course, this depends on the editorial strategy of the journal. What we should avoid, in my opinion, is purely academic numerical examples which are "disguised" in real-life applications, the ideal is to have well-founded methodologically interesting revolutionary rla's, but it is clear that we can also learn from more modest works.

Software

Presentation of the Electre Tri 2.0a

software 

(V. Mousseau, R. Slowinski & P. Zielniewicz)

ELECTRE TRI is a Multiple Criteria Sorting Method ([Yu 92], [Roy, Bouyssou 93]) which aims at assigning a set of alternatives $A = \{a_1, a_2, \dots, a_l\}$ evaluated by n criteria g_1, g_2, \dots, g_n to one of the preference-ordered and pre-defined categories. The assignment of an alternative a_k to a specific category results from a comparison of its evaluation on all criteria to the profiles defining the limits between consecutive categories.

We present in this section a new implementation of ELECTRE TRI. It integrates specific functionalities supporting the Decision Maker (DM) in the preference elicitation process. These functionalities grouped in a module called ELECTRE TRI Assistant aim at reducing the cognitive effort required from the DM in the phase of calibration of the preference model. The main characteristic feature of ELECTRE TRI Assistant is the inference of the ELECTRE TRI preferential parameters from assignment examples supplied by the DM.

The ELECTRE TRI software version 2.0a (Mousseau et al. 1999, 2000) is the result of a collaboration between LAMSADE (University of Paris-Dauphine, France) and the Institute of Computing Science (Poznan University of Technology, Poland). It is developed in C++ programming language and runs under Microsoft Windows 3.1, 95, 98, NT.

The structure of the options available in the software is the following:

File: this option allows the user to create a new project, load an existing project and save the current project. Additional print and import options are provided. Generation of project reports is also available,

Edit: enables the user to enter the data required by Electre Tri (criteria, alternatives, weights, profiles and thresholds) and/or to use the ELECTRE TRI Assistant functionalities.

Results: allows the user to visualize the results (including intermediary results such as degree of credibility of the outranking relation, comparison of alternatives to profiles,...); also gives a graphical representation of alternatives and profiles.

Help: provides the user an online help.

Support for Parameters Elicitation: ELECTRE TRI Assistant

One of the main difficulties that an analyst must face when interacting with a DM in order to build a decision aid procedure is the elicitation of various parameters of the DM's preference model. In the ELECTRE TRI method, the analyst should give values to profiles, weights and thresholds. Even if these parameters can be interpreted, it

is difficult to fix directly their values and to have a clear global understanding of the implications of these values on the output of the model.

[Mousseau, Slowinski 98] proposed a methodology that avoids this problem by substituting assignment examples for direct elicitation of the model parameters. The values of the parameters are inferred through a certain form of regression on assignment examples. ELECTRE TRI Assistant implements this methodology in a way that requires from the DM much less cognitive effort: the elicitation of parameters is done indirectly using holistic information given by the DM through assignment examples, i.e. alternatives assigned by the DM to categories according to his/her comprehensive preferences.

The ELECTRE TRI Software 2.0 includes an assistant that is able to infer preference model parameters from assignment examples provided by the user. The present version supports the user in defining the weights of criteria and the cutting level λ for the pessimistic assignment procedure only (the next version will include similar functionalities for profiles and thresholds). The use of ELECTRE TRI Assistant functionalities proceeds according to the following scheme:

- (a) input the list of assignment examples composed of alternatives for which the DM gives a holistic assignment (such alternative can be an existing alternative or a fictitious one designed for this purpose); imprecise assignments are accepted, i.e., the DM can express an hesitation in the assignment of an alternative a by specifying a subset of consecutive categories to which a could be assigned,
- (b) give preferential information on the weights and/or cutting level (preorder, comparisons of specific coalitions, bounds on weights, on the cutting level λ) - optional,
- (c) run the inference procedure to find the most adequate values of the weights,
- (d) check for the acceptability of the obtained weight vector and, either:
 - accept the proposed weights so as to use them by the assignment procedure,
 - or reject them and revise the information provided in step (a) and/or (b), then perform (c) again.

Au mois de septembre dernier, le professeur Roman Slowinski a reçu le Diplôme et les Insignes de Docteur Honoris Causa de la Faculté Polytechnique de Mons en Belgique.

About the 51st Meeting

*Henrikas Pranevicius, Leonidas Sakalauskas,
Edmundas-Kazimieras Zavadskas, and
Arturas Kaklauskas*

The 52nd Meeting of the European Working Group on "Multicriteria Decision Aid" took place on October 5-6, 2000, at the Academy of Sciences of Lithuania, in Vilnius (Lithuania). The Meeting was organised by Henrikas Pranevicius, Leonidas Sakalauskas, Edmundas-Kazimieras Zavadskas and Arturas Kaklauskas. There were 62 participants from 18 countries and 20 communications were presented. The social program consisted of the Meeting Dinner at the "Freskos" Restaurant on Friday evening, October 6. A bus tour to the Open Air Museum of the Center of Europe was organised on Saturday morning, October 7. The organisations that contributed financial support to the Meeting were: the Lithuanian State Foundation on Study and Research, Institute of Mathematics and Informatics, and Vilnius Gediminas Technical University.

Those attending the Meeting were: Artyom Asanov, Violeta Baltusiene, Audrius Banaitis, Jean-Pierre Barthelemy, Aleksandra Bat, Foued Ben Abdelaziz, Arkadij Borisovs, Willem K. Brauers, Anna Cavallo, Vitalij Denisov, Danae Diakoulaki, Dimitar Dimitrov, Gintautas Dzemyda, Flourentzos Flourentzov, Maria del Carmen Garcia Centeno, Salvatore Greco, Walter Habenicht, Jean-Marie Hauglustaine, Jaroslava Halova, Adam Janiak, Artūras Kaklauskas, Mindaugas Krutinis, Nerija Kvederyte, Oleg Larichev, Sven-Olov Larsson, Philippe Lenca, Vitalij Levin, Alexander Lotov, Ilona Magdisyuk, Jean-Marc Martel, Vitalij Molostvov, Tomasz Mroz, Abdelkerim Mselmi, Yevgeny Naryzhny, Vladimir Noghin, Maria-Franca Norese, Friedel Peldschus, Tomas Petkus, Alexey Petrovsky, Henrikas Pragarauskas, Henrikas Pranevicius, Saulius Raslanas, Sharunas Raudys, Felix Rauschmayer, Bernard Roy, Leonidas Sakalauskas, Mifodijus Sapagovas, Yakov Shafransky, Roman Slowinski, Sergey Strahov, Tomasz Thiel, Eriks Tipans, Nikolay Tonchev, Francis Condis y Troyano, Alexander Tuzikov, Leonas Ustinovichius, Ottu Vaarmann, Premysl Zak,

Edmundas-Kazimieras Zavadskas, Antanas Zhilinskas and Vladislav Zhukovsky

The Meeting was run in an excellent way and the discussions were very exciting. The communications were divided into six sessions, each considering a special subject, and each of the communications has been successfully presented by their respective speaker. Two plenary lectures were delivered by Prof. Sharunas Raudys "Statistical and neural classifiers while solving multicriterial problems" and Prof. Walter Habenicht "Multimode optimization in logistics", that aroused an interest comments and discussions.

The presented papers are accessible at the website of the Meeting:

<http://www.science.mii.lt/MCDA-52>

and the volume of Proceedings of the Meeting are to be published at the beginning of 2001 in a special issue of the journal "Informatika":

(<http://www.vtex.lt/informatica/>).

The Meeting was opened by a Vice-Mayor of Vilnius Habil. Dr. Algim Kudzys, who noted the exceptional role of this event, because this was the first meeting of EURO Groups in the Baltic and NIS countries. It gave an exceptional opportunity for interaction between the experienced group members and new ones from Eastern Europe, who took an active part in the Meeting. The participants were pleasantly surprised as the charms of rapidly renewed architecture of Vilnius Old Town as well as modern public service at hotels, banks, transport, etc. The experience of MCDA-52 will be undoubtedly important for organising new EURO events and attracting new members from Eastern Europe.

The next meetings will be: the 53rd Meeting in Athens, Greece, March 2001, and the 54th Meeting in Belgium, October 2001 (for more details see the Forthcoming Meetings section).

PROGRAMME DEFINITIF/FINAL PROGRAM

Jeudi 5 / Thursday 5

14:00 - 14:15 Introduction aux Journées / Introduction to the Meeting

Session 1. Statistical and neural classifiers in multicriterial analysis (Président de session / Chairman: Roman SLOWINSKI):

1. 14:15 - 15:15 Sharūnas RAUDYS. *Statistical and neural classifiers while solving multicriterial problems.*
2. 15:15 - 15:45 Ilona MAGDISYUK. *Using the cascade-correlation network to evaluate investment protection.*
3. 15:45 - 16:15 Alexey PETROVSKY. *On Method for Approximation of Diverse Individual Sorting Rule.*

Papiers soumis à discussion / Papers submitted to discussion

- Eriks TIPANS. *Overcoming of "combinatorial explosion" in classification algorithm "Cora".*

16:15 - 16:45 Cafe / Coffee Break

Session 2. MCDM in architecture and building construction (Président de session / Chairman: Leonidas SAKALAUSKAS):

1. 16:45 - 17:15 Edmundas Kazimieras ZAVADSKAS, Artūras KAKLAUSKAS, Saulius RASLANAS, Audrius BANAITIS. *Multiple criteria analysis, modelling and forecasting of real estate sector in Lithuania.*
2. 17:15 - 17:45 Jean-Marie HAUGLUSTAINE. *Multicriteria and Multiactors aspects of an interactive tool aiding to sketch the building envelope during the first stages of the architectural design.*
3. 17:45 - 18:15 Flourentzos FLOURENTZOV. *Construire le jugement du jury d'un concours d'Architecture.*
4. 18:15 - 18:45 Tomasz THIEL, Tomasz MROZ. *Application of multicriteria decision aid method for ranking heating systems for museums building.*

Papiers soumis à discussion / Papers submitted to discussion

- Edmundas-Kazimieras ZAVADSKAS, Artūras KAKLAUSKAS, Nerija KVEDERYTE. *Decision support system for Buiding Life Cycle.*
- Edmundas-Kazimieras ZAVADSKAS, Artūras KAKLAUSKAS, Saulius RASLANAS, Mindaugas KRUTINIS. *A multiple criteria property E-business system.*

Vendredi 6 / Friday 6

Session 3. Multimode and multiobjective optimization (Président de session / Chairman: Willem K. BRAUERS):

1. 8:30 - 9:30 Walter HABENICHT. *Multimode optimization in logistics.*

2. 9:30 - 10:00 Vladimir KALIKA. *An approach to account for uncertainty in multicriteria optimization.*
3. 10:00 - 10:30 Adam JANIAK, Yakov SHAFRANSKY, Alexander TUZIKOV. *Permutation scheduling problems with ordered criteria.*

Papiers soumis à discussion / Papers submitted to discussion

- Vitalij LEVIN. *Fuzzy sets and collective decision making in fuzzy environment.*
- Gintautas DZEMYDA, Tomas PETKUS. *Application of computer network to solve the complex applied multicriterial optimization problems.*
- Leonidas SAKALAUSKAS. *On stochastic approach to multiobjective programming.*
- Antanas ZHILINSKAS. *Statistical models in multiextremal optimization.*

10:30 - 11:00 Cafe / Coffee Break

Session 4. Methods and software for MCDM (*Président de session / Chairman:* Arkadij BORISOVS) :

1. 11:00 - 11:30. Friedel PELEDSCHUS, Edmundas-Kazimieras ZAVADSKAS, Leonas USTINOVICHIIUS. *LEVI 3.0 – A Program For Multiple Criteria Evaluation.*
2. 11:30 - 12:00 Oleg LARICHEV. *Method ZAPROS for ranking multicriteria alternatives and the problem of alternatives incomparability.*
3. 12:00 - 12:30 Artyom ASANOV, Oleg LARICHEV, Yevgeny NARYZHNY, Sergey STRAHOV. *ESTHER – expert system for decision aid in cases of acute drug poisonings.*

Papiers soumis à discussion / Papers submitted to discussion

- Gabriela Fernandez BARBERIS. *Multicriteria decision aid. An application using the D-PAD methodology.*
- Zak PREMYSL, Jaroslava HALOVA. *Quantitative structure-activity relationships by GUHA method.*
- Vladislav ZHUKOVSKY, Vitalij MOLOSTVOV. *One Feature of Multi-Criteria Problems in Uncertainty.*

12:30 - 14:00 - Le déjeuner / Lunch

14:00 - 14:30 Bernard ROY. EURO WG matters, next meetings.

Session 5. Economy - environmental multiple interactions (*Président de session / Chairman: Jean-Pierre BARTHELEMY*) :

1. 14:30 - 15:00 Aleksandra BAT, Francis Condis y TROYANO. *The competitiveness of industrial sectors in EECC countries as the base for their successful economic integration to the EU.*
2. 15:00 - 15:30 Sven-Olov LARSSON. *Multicriterial decision aid and economic choice theory.*
3. 15:30 - 16:00 Anna CAVALLO, Maria Franca NORESE. *GIS and multicriteria analysis to evaluate map erosion and landslide hazards.*

Papiers soumis à discussion / Papers submitted to discussion

- Violeta BALTUSIENE. *On the Application of Multicriterial Optimization in Business.*
- Nikolay TONTCHEV, Dimitar DIMITROV. *Technology Offer Method and Software for Multicriterial Aid Decisions Making.*

16:00 - 16:30 Cafe / Coffee Break

Session 6. Theoretical aspects of preference and comparability (*Président de session / Chairwoman: Maria-Franca NORESE*):

1. 16:30 - 17:00 Jean Pierr BARTHELEMY. *Aspects de la théorie du consensus.*
2. 17:00 - 17:30 Vladimir NOGHIN. *Introduction to the theory of relative importance of criteria.*
3. 17:30 - 18:00 Salvatore GRECO, Benedetto MATARAZZO, Roman SLOWINSKI. *Customer satisfaction analysis using a rough set based inference of decision rules.*
4. 18:00 - 18:30 Felix RAUSCHMAYER. *Philosophical aspects of incommensurability and incomparability.*

Papiers soumis à discussion / Papers submitted to discussion

- Escribano RODENAS, Maria del Carmen GARCIA CENTENO. *Modélisation multicritère de l'Aide Humanitaire.*
- Foued Ben ABDELAZIZ, Jean-Marc MARTEL, Abdelkerim MSELMI. *MIADEG: une méthode interactive d'aide à la décision de groupe.*

20:00 - Le Banquet des Journées / Meeting Dinner

Forthcoming Meetings

(This section is prepared by Luís Dias)

INFORMS 2000 Fall Meeting, San Antonio, USA, November 5-8, 2000.

The Decision Science Institute 2000 Annual Meeting, Orlando, Florida, USA, November 18-21, 2000.

Congreso sobre técnicas de ayuda a la decisión en la defensa. I reunión de estadística militar (I REM); II reunión de investigación militar operativa (II RIMO). Del 12 al 15 diciembre de 2000. Escuela Politécnica Superior del Ejército, Madrid. Información Adicional: Fax: 91 205 40 20. E-mail: ceiodef@oc.mde.es. Internet: www.ceiodef.mde.es.

First International Conference on Evolutionary Multi-Criterion Optimization (EMO'01), March 7-9, 2001 (Wednesday to Friday), ETH Zurich, Switzerland. <http://www.tik.ee.ethz.ch/emo/>.

53rd Meeting of the EWG "Multicriteria Aid for Decisions", Athens, Greece, 29-30, March 2001, organized by Danae Diakoulaki, ass. Professor at the National Technical University of Athens, Tel: +30-1-772-3254, e-mail: diak@chemeng.ntua.gr. Place: Training and Conference Center of the National Mortgage Bank of Greece, Glyfada. Suggested topic: Economy-Energy-Environment (3E) interactions.

10th IFORS Special Conference: IFORS – SPC 10. Topic: New Trends in Banking Management. Athens – Greece, April 1-3, 2001. Conference Chair: Prof. Constantin Zopounidis (kostas@ergasya.tuc.gr). Place: Training and Conference Center of the National Bank of Greece, Glyfada. Conference Secretariat: Phone: +30 1 3819892, Fax: +30 1 3847578, e-mail: eeee@otenet.gr.

Evaluation and decision models: A critical perspective

by

Denis Bouyssou (ESSEC), Thierry Marchant (Ghent Univ.), Marc Pirlot (SMRO, Faculté Polytechnique de Mons), Patrice Perny (LIP6, Univ. Paris VI), Alexis Tsoukiàs (LAMSADE, Univ. Paris-Dauphine), and Philippe Vincke (SMG-ISRO, Univ. Libre de Bruxelles)

Abstract: The purpose of Evaluation and Decision Models: A Critical Perspective is to provide a critical thinking framework for all individuals utilizing decision and evaluation models, whether it be for research or applications. It is axiomatic that all evaluation and

decision models suffer some limitations. There are situations where a decision model will not perform to expectations. This book argues that there is no best decision or evaluation model, but that decision-makers must understand the principles of formal evaluation and decision models and apply them critically. Hence, the book seeks to deepen our understanding of evaluation and decision models and encourage users of these models to think more analytically about them.

The authors work in six different European universities. Their backgrounds are varied: mathematics, economics, engineering, law, and geology, and they teach in engineering, business, mathematics, computer science, and psychology in their universities. As a group, the authors have particular expertise in a variety of decision models that include preference modelling, fuzzy logic, aggregation techniques, social choice theory, artificial intelligence, problem structuring, measurement theory, operations research, and multiple criteria decision support. In addition to their decision analysis research, all the authors have been involved in a variety of high-impact applications which include software evaluation, location of a nuclear repository, the rehabilitation of a sewer network, and the location of high-voltage lines. It is this variety within the authorship that unifies this book into a systematic examination of how best formal decision models can be used. The monograph is an excellent tool for researchers of decision analysis and decision-makers.

Contents: 1. Introduction, 2. Choosing on the basis of several options, 3. Building and aggregating evaluations, 4. Constructing measures, 5. Assessing competing projects, 6. Comparing on several attributes, 7. Deciding automatically, 8. Dealing with uncertainty, 9. Supporting decisions, 10. Conclusion, Bibliography, Index.

Multicriteria Optimization

by

Matthias Ehrgott

Summary

The book provides an introduction to multicriteria optimization. It covers theoretical topics such as existence of optimal solutions as well as methodological issues. A classification of multicriteria optimization problems is developed and used as a guideline throughout the book. First, fundamental solution concepts are defined and their properties and relations discussed. Then a variety of methods to find optimal solutions is described. Chapters on multicriteria linear optimization, uncommon solution concepts, and combinatorial problems conclude the book.

The text contains material which cannot be found in other textbooks on the subject, because several chapters are based on new research results. It is suitable for a mathematically oriented course on multicriteria optimization. The material can be covered in the order in which it is presented, but it is also possible to select topics from various chapters. The exercises at the end of each chapter provide possibilities to practice as well as some outlooks to more general settings, when appropriate.

Contents:

- 1 Introduction
- 2 Pareto Optimality and Efficiency
- 3 Weighted Sum Scalarization
- 4 Other Methods for Pareto Optimality
- 5 Multicriteria Linear Programming
- 6 Other Optimality Concepts
- 7 Combinatorial Problems with Multiple Objectives

Bibliography, List of Figures, List of Tables, Author Index, Subject Index

VIII + 243 pages, 86 figures, 10 tables, 64 exercises

ISBN 3-540-67869-7, 2000, Lecture Notes in Economics and Mathematical Systems vol. 491, Berlin: Springer

Elicitation of Preferences

edited by

Baruch Fischhoff

Dept. of Social and Decision Sciences, Carnegie Mellon University, Pittsburgh, PA,
USA

Charles F. Manski

Dept. of Economics, Northwestern University, Evanston,
IL, USA

Abstract:

Economists and psychologists have, on the whole, exhibited sharply different perspectives on the elicitation of preferences. Economists, who have made preference the central primitive in their thinking about human behavior, have for the most part rejected elicitation and have instead sought to infer preferences from observations of choice behavior. Psychologists, who have tended to think of preference as a context-determined subjective construct, have embraced elicitation as their dominant approach to measurement.

This volume, based on a symposium organized by Daniel McFadden at the University of California at Berkeley, provides a provocative and constructive

engagement between economists and psychologists on the elicitation of preferences.

Preferences and Decisions under Incomplete Knowledge

by

Fodor, J.,
Szent Istvan, University, Budapest, Hungary
De Baets, B.,
University of Gent, Belgium
Perny, P.,
University of Paris, France
(Eds.)

Nowadays, decision problems are pervaded with incomplete knowledge, i.e., imprecision and/or uncertain information, both in the problem description and in the preferential information. In this volume leading scientists in the field address various theoretical and practical aspects related to the handling of this incompleteness. The problems discussed are taken from multi-objective linear programming, rationality considerations in preference modelling, non-probabilistic utility theory, data fusion, group decision making and multicriteria decision aid. The book is oriented towards researchers, graduate and postgraduate students in decision analysis, fuzzy sets and fuzzy logic, and operations research/management science.

Keywords: Fuzzy Logic, Fuzzy Sets, Preferences, Decision Making, Utility Theory, Incomplete Information

Contents: P. Vincke: (P, Q, I, J) - Preference Structures.- P. Fortemps, J. Teghem: Multi-Objective Fuzzy Linear Programming: The MOFAC Method.- V. Cutello, J. Montero: An Extension of the Axioms of Utility Theory Based on Fuzzy Rationality Measures.- D. Dubios, E. Pap, H. Prade: Hybrid Probabilistic-Possibilistic Mixtures and Utility Functions.- J. Montero, A. del Amo, E. Molina: Additive Recursive Rules.- R.R. Yager: Maximizing the Information Obtained from Data Fusion.- H. Nurmi, J. Kacprzyk: Social Choice under Fuzziness: A Perspective.- S. Greco, B. Matarazzo, R. Slowinski: Fuzzy Extension of the Rough Set Approach to Multicriteria and Multiattribute Sorting.- J.-L. Marichal: Behavioral Analysis of Aggregation in Multicriteria Decision Aid.- M. Grabisch, C. Labreuche: To be Symmetric or Asymmetric? A Dilemma in Decision Making.- J.-P. Barthélémy: Monotone Functions on Finite Lattices: An Ordinal Approach to Capacities, Belief and Necessity Functions.-

Series: Studies in Fuzziness and Soft Computing. VOL. 51

Fuzzy Measures and Integrals Theory and Applications

by

M. Grabisch, T. Murofushi, M. Sugeno (eds)

Resumé: Concepts similar to fuzzy measure have been introduced independently in many domains: in non-expected utility theory, cooperative game theory, complexity analysis, measure theory, etc. This book reflects all these facets. It gathers survey papers written by leading researchers in the field, covering a selection of most significant topics. The first part is devoted to fundamental and theoretical material, while the second part deals with more applied topics such as decision making and pattern recognition. The book is of interest to researchers in decision making, artificial intelligence, applied mathematics, mathematical social sciences, etc.

Contents:

Foreword: P. Wakker. Preface: M. Grabisch, T. Murofushi, M. Sugeno. PART 1 : THEORY: Fuzzy measures and integrals (T. Murofushi, M. Sugeno), Non-additive measure and integral, basic concepts and their role for applications (D. Denneberg), The interaction and

Mobius representation of fuzzy measures on finite spaces, k-additive measures: a survey (M. Grabisch), Hierarchical decomposition of the Choquet integral (K. Fujimoto, T. Murofushi), Towards generalized Belief functions (I. Kramosil), Integration in possibility theory (G. de Cooman), On the autocontinuity of set functions (Z. Wang, K. Xu), Pseudo-convolution and its applications (E. Pap), Integrals with respect to a general fuzzy measure (P. Benvenuti, R. Mesiar), Triangular norm-based measures: properties and integral representations (P. Klement, D. Butnariu), On Choquet and Sugeno integrals as aggregation functions (JL Marichal), Comparison between three fuzzy integrals (H. Imaoka). PART 2 : APPLICATIONS: Choquet expected utility : a new approach to individual behaviour under uncertainty and to social welfare (A. Chateauneuf, M. Cohen), Qualitative decision theory with Sugeno integrals (D. Dubois, H. Prade, R. Sabbadin), The Choquet integral in multiattribute decision making (T. Murofushi, M. Sugeno), Application of the Choquet integral in multicriteria decision making (M. Grabisch, M. Roubens), Fuzzy measure-based subset interactive models for subjective evaluations (S. Kwon, M. Sugeno), The Choquet integral in a rough software cost decision system (J.F. Peters III, L. Han, S. Ramana), Fuzzy integral for classification and feature extraction (M. Grabisch), Fuzzy integrals in image processing and recognition (Jim Keller, P. Gader, A.K. Hocoaglu), An algorithm for calculating natural extensions with respect to lower probabilities (Z. Wang, G. Klir, J. Swan-Stone, K. Xu).

Physica-Verlag, Heidelberg (1999).

Energy Decisions and the Environment: A Guide to the Use of Multicriteria Methods

by

Benjamin F. Hobbs

Johns Hopkins University, Baltimore, MD, USA

Peter Meier

International Development and Energy Associates,
London, UK

Planning, operating, and policy making in the electric utility and natural gas sectors involves important trade-offs among economic, social, and environmental criteria. These trade-offs figure prominently in ongoing debates about how to meet growing energy demands and how to restructure the world's power industry. *Energy Decisions and the Environment: A Guide to the Use of Multicriteria Methods* reviews practical tools for multicriteria (also called multiobjective) decision analysis that can be used to quantify trade-offs and contribute to more consistent,

informed, and transparent decision making. These methods are designed to generate and effectively communicate information about trade-offs; to help people form, articulate, and apply value judgments in decision making; and to promote effective negotiation among stakeholders with competing interests. *Energy Decisions and the Environment: A Guide to the Use of Multicriteria Methods* includes explanations of a wide range of methods, tutorial applications that readers can duplicate, a detailed review of energy–environment applications, and three in-depth case studies.

Contents:

Acknowledgments. 1. Introduction. 2. The Application of MCDM Methods. 3. Screening and Tradeoff Analysis. 4. Scaling, Weighting, and Amalgamation. 5. Resolving Differences (Step 10). 6. An Illustrative Numerical Example. 7. A Review of MCDM Applications in Energy Planning and Policy. 8. MCDM at BC Hydro: The 1995 Electricity Plan. 9. Multi-Method MCDM at BC Gas. 10. An Experimental Comparison of MCDM Methods at Seattle City Light. 11. Closing Remarks. References. Index.

Kluwer Academic Publishers, Boston, Hardbound, ISBN 0-7923-7875-X, July 2000, 272 pp.

Large Scale Interactive Fuzzy Multiobjective Programming: Decomposition Approaches

by

Masatoshi Sakawa

*Department of Industrial and Systems Engineering,
Faculty of Engineering, Hiroshima University,
1-4-1, Kagamiyama, Higashi-Hiroshima, 739-8527, Japan
E-mail: sakawa@msl.sys.hiroshima-u.ac.jp*

Simultaneous considerations of multiobjectiveness, fuzziness and block angular structures involved in the real-world decision making problems lead us to the new field of interactive multiobjective optimization for large scale programming problems under fuzziness. The aim of this book is to introduce the latest advances in the new field of interactive multiobjective optimization for large scale programming problems under fuzziness on the basis of the author's continuing research. Special stress is placed on interactive decision making aspects of fuzzy multiobjective optimization for human-centered systems in most realistic situations when dealing with fuzziness. The book is intended for graduate students, researchers and practitioners in the fields of operations research,

industrial engineering, management science and computer science.

Keywords:

Fuzzy Logic, Multiobjective Programming, Interactive Decision Support, Decomposition

Contents:

- Introduction: Introduction and historical remarks.
- Organization of the book.
- Mathematical Preliminaries: Fuzzy sets. Fuzzy numbers. Fuzzy decision. Multiobjective linear programming. Interactive fuzzy multiobjective linear programming. Genetic algorithms.
- The Dantzig-Wolfe Decomposition Method: Linear programming problems with block angular structures. Development of the decomposition algorithm. Initial feasible basic solution. Unbounded subproblem. Restricted master problem.
- Large Scale Fuzzy Linear Programming: Linear programming problems with block angular structures. Fuzzy goal and fuzzy constraints. Fuzzy linear programming. Numerical example.
- Large Scale Fuzzy Multiobjective Linear Programming: Multiobjective linear programming problems with block angular structures. Fuzzy goals. Fuzzy multiobjective linear programming. Interactive fuzzy multiobjective linear programming.
- Large Scale Multiobjective Linear Programming with Fuzzy Numbers: Introduction. Interactive multiobjective linear programming with fuzzy numbers. Interactive fuzzy multiobjective linear programming with fuzzy numbers. Conclusion.
- Genetic Algorithms with Decomposition Procedures: Introduction. Multidimensional 0-1 knapsack problems with block angular structures. Genetic algorithms with decomposition procedures. Numerical experiments.
- Large Scale Fuzzy Multiobjective 0-1 Programming: Multiobjective multidimensional 0-1 knapsack problems with block angular structures. Fuzzy goals. Fuzzy multiobjective 0-1 programming. Interactive fuzzy multiobjective 0-1 programming.
- Large Scale Interactive Multiobjective 0-1 Programming with Fuzzy Numbers: Introduction. Interactive multiobjective 0-1 programming with fuzzy numbers. Interactive fuzzy multiobjective 0-1 programming with fuzzy numbers.
- Conclusion.
- Further Research Directions: Large scale interactive fuzzy multiobjective linear fractional programming. Large scale fuzzy multiobjective nonlinear programming.

Fields: Operations Research/Decision Theory; Artificial Intelligence; Optimization and Optimal Control

Written for: Researchers, students; practitioners Book category: Monograph.

Series: Studies in Fuzziness and Soft Computing. VOL. 48, Physica-Verlag, A Springer-Verlag Company May 2000.

New Frontiers of Decision Making for the Information Technology Era

by

Yong Shi (University of Nebraska, Omaha)

and

Milan Zeleny (Fordham University, New York)

The volume provides users and developers of the IT/S (information technology and systems) with information about the advances in decision making and decision-making support that empower and enable information technology in the direction of productivity and effectiveness of decision making in business. The chapters have been written by well-known international experts in decision making and they explore the frontiers of decision making in the era of IT/S.

The book is intended to serve as a research source, scientific reference and business support source, as well as a book of student readings that will appeal to a larger international audience.

Contents:

Behavioral Issues in Decision Making; Multiple Criteria and Decision Support Systems; Objective Space Analysis; Risk and Efficiency Management; Tradeoff Analysis in Decision Making; Data Environment Analysis; Multiple Criteria System Engineering; Multiple Criteria Applications.

Readership:

Students, professors, researchers and practitioners in business, management and operations research.

World Scientific, May 2000. ISBN: 981-02-4299-9.

Aide à la décision – Une approche par les cas

par

Ph. Vallin et D. Vanderpooten
(LMSADE, Univ. Paris-Dauphine)

Cet ouvrage présente la démarche de modélisation et de résolution de problématiques d'aide à la décision par l'analyse et le commentaire de cas provenant, pour la majorité, de problèmes réels. Les domaines abordés couvrent la logistique, la gestion de production, la gestion des ressources humaines, le marketing, la finance.

L'originalité de cet ouvrage est l'éclairage mis sur l'analyse et le processus de modélisation (conception du modèle). Pour accompagner le lecteur non spécialiste, chaque cas est traité intégralement, de l'analyse à la résolution de chaque problème. Les difficultés sont présentées graduellement, le recours à un ouvrage théorique spécialisé n'est donc pas nécessaire.

Les cadres de modélisation présentés sont la **théorie des graphes** (chemins, flots, arbres), la **programmation linéaire** (continue et en nombres entiers), l'**ordonnancement et la gestion des stocks**, la **théorie de la décision et l'analyse multicritère**.

Les résultats obtenus sont analysés et commentés en termes de décisions concrètes pour expliquer les apports et les limites de la modélisation mathématique.

Sont concernés par cet ouvrage :

- les étudiants (formation initiale et continue) en gestion, mathématiques appliquées, informatique, des universités, écoles de commerce et d'ingénieurs,
- les professionnels confrontés aux problématiques de prise de décision dans les diverses fonctions de l'entreprise (études stratégiques, systèmes d'information, logistique, production, finance, marketing, relations humaines).
